

IILM UNIVERSITY
Greater Noida

Full-Stack Feature Development for a Fintech Web Platform

Student Name	Adiba Qamar
Enrollment Number	CS-23411553
Program & Semester	B.Tech CSE Semester VII
Organization Name	Bluestock.in

Internship Duration: 1 June 2026 – 1 August 2026

Internship Overview

Organization

Bluestock.in — fintech technology company building a stock-market research and analytics platform for retail investors in India.

Role

Software Developer Engineer (Full-Stack)
Intern

Duration

Two-month internship
1 June 2026 – 1 August 2026

- Worked on user-facing features and supporting backend APIs.
- Reviewed an existing codebase and followed established design and coding conventions.
- Integrated frontend, backend APIs, and database layers.
- Participated in code reviews, testing, debugging, and QA hand-off.

Organization Profile

- Bluestock.in is a fintech technology company focused on stock-market research and analytics for retail investors in India.
- The platform combines market data, company fundamentals, and IPO information through a web-based interface.
- A small cross-functional engineering team maintains frontend development, backend APIs, and data pipelines.
- The workflow follows an Agile-style approach with short task cycles and regular check-ins.
- The internship provided practical exposure to a production-grade codebase, REST API design, Git-based collaboration, and code review.

Problem Statement

- As the platform grows, its frontend and backend must continuously evolve to support new features and changing data requirements.
- New features need to match the existing design system and coding conventions.
- Frontend features must integrate cleanly with existing APIs and database schemas.
- Every change must pass functional testing and code review without introducing regressions.
- The project therefore focused on designing, developing, testing, and delivering assigned features within an existing production codebase.

Project Objectives

Codebase

Understand existing structure, conventions and workflow.

Frontend

Develop UI components and pages for assigned features.

Backend

Build and test REST APIs and business logic.

Integration

Connect frontend, API and database layers.

Quality

Use testing, debugging and code review.

Learning

Understand how feature work fits the product release cycle.

Scope of the Project

- Review of the existing codebase, design system, and API conventions.
- Development of frontend components and pages for assigned features.
- Development and testing of backend REST APIs.
- Integration of frontend and backend layers with MongoDB.
- Participation in pull-request code reviews and resolution of feedback.
- Manual testing and bug fixing before feature hand-off.
- Out of scope: production deployment, infrastructure management, architectural redesign, and unrelated modules.

Technologies & Tools

Frontend

React.js
HTML5
CSS3
JavaScript (ES6+)

Backend

Node.js
Express.js
REST APIs

Database

MongoDB
Data storage & retrieval

Version Control

Git
GitHub

Collaboration

Trello
Slack

Testing

Postman
Browser DevTools

System Architecture & Data Flow

Database response → REST API → Frontend UI update

Task Assignment → Development → Pull Request → Code Review → QA / Hand-off

Methodology / Development Workflow

Project Outcomes & Observations

Feature Area

User-facing dashboard and supporting APIs

Review Cycles

Typically 1–2 rounds of reviewer feedback per pull request

Common Feedback

Edge-case handling and code readability

- Security-related comments occurred less often but were treated with the highest priority whenever raised.
- Later weeks showed fewer review comments and faster pull-request approval.
- The internship reinforced the importance of version control, clear API contracts, and consistent code review.
- Structured onboarding and mentorship helped reduce ramp-up time and improve code quality.

Skills & Learning Outcomes

Full-Stack Development

Practical experience across frontend, backend and database integration.

REST APIs

API development, validation, error handling and testing.

Database Integration

Working with MongoDB for data storage and retrieval.

Git & Collaboration

Branches, pull requests, code review and team workflow.

Testing & Debugging

Postman, browser testing and DevTools-based debugging.

Engineering Practices

Readable code, edge-case handling and iterative feedback.

CONCLUSION

The internship provided hands-on exposure to full-stack feature development within an existing fintech platform. It strengthened practical understanding of frontend-backend integration, REST APIs, MongoDB, testing, Git collaboration and code-review practices.

Thank You
